

# Go!Control

HOW TO PERFORM A CELL UNIT TEST

# Cell Unit Test

- ▶ Your Go!Control panel may be equipped with a built-in cellular radio.
- ▶ The cellular radio communicates between your Go!Control panel and the central monitoring station.
- ▶ Your Go!Control panel can send its alarm messages, or system trouble, or status messages over the air without using the land-based telephone system.
- ▶ To check the radio status, use the following steps...

# Cell Unit Test

1. Go to **Security, Menu**, and then **Toolbox**.

# Cell Unit Test

2. The panel will ask you to enter your current Master Code.

# Cell Unit Test

3. Once you're in the *User Toolbox*, select **Cell Phone Test**.

# Cell Unit Test

4. Enter the Master Code and the Cell Phone test will automatically start.

# Cell Unit Test

5. If any tests fail, note the displayed messages and contact your alarm installer.
  - Your installer will be able to diagnose any possible issues with your system.
